

## Git and GitHub

Step1: Download git from <https://git-scm.com/download/win>

Step 2: Install on your computer. After installing use these two commands also mention on the session video:

```
>>git config - -global user.name "your name"  
>>git config - -global user.email example@gmail.com
```

Step 3: create a repository on GitHub <https://github.com/>

Step 4: download this repository using terminal. Command for download

```
>> git clone https://github.com/AnantaJoy/test.git (your GitHub web address will be different)
```

Step 5: write code on your repository. After completing writing code use this command to add all files to push on GitHub

```
>>git add .  
>>git commit -m "my first commit to GitHub"  
>>git push
```

Step 6: if you're able to do this on your pc. Then share your GitHub repository link in the Google Space
